Summary

Entry-level Software Engineer with a B.Tech in Data Science and hands-on experience building Python and JavaScript services in Linux and Docker environments. Open-source contributor to LibreDesk with strong data structures and algorithms fundamentals, object-oriented design practice, and Git-based workflows.

Technical Skills

Languages: Python, JavaScript, SQL

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming, REST APIs, WebSockets, Asynchronous Processing

Frameworks: Django, FastAPI, Express, React

Databases: SQLite, MySQL, MongoDB

DevOps and Tools: Linux, Docker, Git, GitHub, Postman, AWS (EC2, S3, Lambda, ELB)

Open-Source Experience

LibreDesk **GitHub**

- Contributed to the LibreDesk live chat widget, enabling customers to start real-time support conversations from any website.
- Engineered CSV bulk agent import with asynchronous processing, live progress tracking, and streaming logs, replacing one-by-one agent creation.
- Built reply draft persistence on a relational schema with full CRUD APIs; migrated from browser localStorage to database storage after maintainer review so drafts survive across sessions and devices.
- Implemented dynamic macro updates that keep the UI reactive and in sync as macros change.
- Extended the shared date utility with month-level relative time handling.
- Fixed form submission bugs by normalizing select-box values before submit, preventing malformed payloads.

Projects

Issue-Vault **Demo | GitHub**

- Built a Python tool that archives GitHub issues locally for offline repository analysis.
- Designed a normalized SQLite schema (repositories, issues, labels) for efficient storage and fast querying.
- Integrated the GitHub REST API with pagination and rate-limit handling to archive large repositories reliably.
- Automatically generates a self-contained static HTML site with client-side search and state-based filtering that runs fully offline.
- **Technologies:** Python, SQLite, GitHub REST API, JavaScript, TOML

GitHub Connector **GitHub**

- Consolidated multiple GitHub REST endpoints (users, repositories, commits, issues) into a single FastAPI service.
- Added issue creation with strict request validation using Pydantic models.
- Supported authenticated and public data access through secure token-based authentication.
- **Technologies:** Python, FastAPI, Pydantic, httpx

Sync-D **Demo | GitHub**

- Built a real-time chat application with Socket.IO and live user presence tracking, using React and Zustand for client state.
- Secured the app with JWT authentication, protected routes, and MongoDB persistence.
- Integrated Cloudinary for secure image and media sharing in private conversations.
- Designed a RESTful Node.js and Express backend with a responsive Tailwind CSS frontend that works across devices.
- **Technologies:** React, Node.js, Express, MongoDB, Socket.IO, JWT

Education

G.H. Raisoni College of Engineering and Management, Nagpur Dec 2021 – Jun 2025
Bachelor of Technology (B.Tech), Data Science **CGPA:** 7.8

Certifications

Software Engineer Intern Certificate, HackerRank **Certificate**
